Education

Universidad Nacional de Colombia — Bogotá, Colombia
B.S. in Systems and Computing Engineering (8th Semester) — *Expected Graduation: 2027*

Experience & Competitive Honors

Full-Stack Developer — Bogotá, Colombia
Aquanova — Territorial Management Platform (IDB, EAAB, Cewas) — *2025 – Present*

- **Hackathon Winner:** Awarded 1st place at the Innova-TIC Bogotá Hackathon 2025, organized by Young Water Solutions and Cewas in partnership with Bogotá's Water Company (EAAB).
- Building interactive GIS digital-twin features with **React, Node.js**, and geospatial data layers to monitor water resource conservation and territorial management.
- Designed performant backend services and **PostgreSQL/SQL** data schemas for real-time sensor analytics.
- Integrated AI-assisted testing and linting pipelines to accelerate code review and reduce runtime bugs.

Software Integration & Automation Developer — St. Petersburg & Moscow, Russia
1C Enterprise Global Championships (Selected Colombia Representative) — *2024 – 2025*

- **Global Silver Medalist:** Achieved **2nd Place globally** at the Professionals Championship 2024 Finals in St. Petersburg, competing in Business Process Automation for Organizations.
- **World Finalist:** Ranked among the **top 230 international finalists** selected from over 5,000 participants worldwide at the 1C International Contest in Moscow.
- Engineered a secure **RESTful API** bridge between local 1C ERP systems and **GitLab**, automating sync protocols, webhook handlers, and token authentication.
- Authored and optimized relational **SQL** queries to process complex multi-table structures under strict timed evaluations.

Technical Projects

SenseLife | *FastAPI, Python, PHP, PostgreSQL, WebSockets, Docker* — 2025

- Engineered a real-time hospital telemetry platform to monitor heart rate and respiratory rate for critically ill newborns.
- Implemented asynchronous **FastAPI** microservices and WebSockets to stream vital signs with sub-second latency, persisting patient medical histories in **PostgreSQL**.

PosYa! (JavaLí) | *React, Vite, Electron, Node.js, SQLite, REST APIs* — 2025

- Architected an offline-first Point of Sale desktop system with modular OOP architecture and local **SQLite** persistence.
- Structured comprehensive technical documentation, REST API payload schemas, and electronic invoicing integration specs.

VendeTon | *Java, Android Studio, Android SDK, OOP* — 2025

- Developed a native Android wholesale management app leveraging robust OOP patterns, local storage, and custom views.

Technical Skills

Languages: Java, Python, JavaScript, TypeScript, PHP, SQL, C# (Academic)
Frameworks & Libraries: React, Node.js, Express, FastAPI, Electron, Vite, Tailwind CSS
Databases & Cloud/Tools: PostgreSQL, SQLite, Git, GitHub, GitLab, Docker, GIS
Methodologies & Concepts: Object-Oriented Programming (OOP), RESTful APIs, Real-time Systems, Agile/Scrum, Software Testing

Languages

Spanish: Native | **English**: Professional Working Proficiency (C1) | **French**: Working Proficiency (B2) | **Italian**: Basic Proficiency (B1) | **Turkish**: Elementary (A1)
